MicroTech™ II Upgrade for Centrifugal Chillers

Modernize your pre-2001 McQuay Centrifugal Chiller with the latest controls

If you own a 2001 or older McQuay Centrifugal Chiller you can replace the original MicroTech™ controls platform with the latest MicroTech™ II platform. Improved graphical monitoring and functionality give you greater control over your Chiller’s operating cycle, increasing efficiency and reliability.

Features and Benefits

- **Easy integration** with your building’s BAS using optional LonWorks®, BACnet®, or Modbus® communication networks.
- **MicroTech™ II** control platform fully supports VFDs.
- **User-friendly touch screen** interface displays Chiller status and controls operation.
- **Alarms** and operating conditions stored in memory for troubleshooting.
- **Greater control** of operation increases efficiency & reliability.
Choose a Daikin Applied Upgrade Package

Order P/N 300042762 for Single Compressor Chillers
Order P/N 300042764 for Dual Compressor Chillers

Both kits include MTII controllers, touch screen display with mounting bracket, and replacement sensors.

Note: displays and controllers are shipped without programming.

Breathe new life into your pre-2001 Centrifugal Chiller.

Order P/N 300042762 for Single Compressor Chillers
Order P/N 300042764 for Dual Compressor Chillers

It’s time to make the change.

Your original MicroTech™ (EnergyLine) controls are becoming increasingly expensive and difficult to support. Furthermore, they do not support BAS and the user interface is outdated and cumbersome.

This upgrade can be installed by qualified 3rd party contractors, but a Daikin Applied service tech will also be required to install the software* as well as complete the final check and commissioning steps.

*Displays and controller are shipped without programming.
